IHC Beaver[®] dredgers

Date: April 2022

Introduction

IHC designs and builds a variety of standardised and custom-built cutter suction dredgers (CSD). These are capable of dredging compacted soil types and materials, such as clay and rock. High accuracy and a continuous rate of production ensure that IHC's cutter suction dredges are ideal for

many dredging jobs, such as land reclamation and the construction of new harbour basins and canals.

This document provides insight in the long and rich history of IHC's standardised cutter suction dredgers, the IHC Beaver® series.

IHC Beaver[®] dredgers portfolio 2021

The IHC Beaver[®] is a range of standardised dismountable cutter suction dredgers, pre-configured for your dredging project. IHC Beaver[®] CSDs are reliable, fuel-efficient, have low maintenance costs and are extremely productive. They are equipped with state-of-the-art technology and offer the following features:

- dismountable and transportable over land
- suitable for one-man operations
- easily customisable with a wide range of optional equipment
- low emissions and environmentally-friendly operation.

The design of our CSDs is continuously improved using the latest technological developments and feedback from customers.

History of IHC Beaver® dredgers

The IHC Beaver® series was developed in 1963 to meet an ever increasing demand for small but sturdy cutter suction dredgers. Its key features were value-for-money, short delivery time and ease of maintenance. A lot has changed in the world of IHC Beaver® dredgers, but these key features have remained.

The initial series consisted of the Beaver® Cub, Master and King, which were soon accompanied by the Prince and Giant. With the launch of the NG series in the late 80's the direct-driven submerged dredge pump was introduced to the market, a true innovation for larger dredging depths. The latest series consists of the Beaver® 30, 40, 45, 50 and 65DDSP.
